

Job Title: Installation Technician (Vehicle Telematics & Testing)
Team : Operations
Location: West Midlands, Field Based
Salary: Competitive Base Salary
Benefits: 25 days holiday, Pension, Bupa Health Care and Health Insurance

ROLE PROFILE AND PURPOSE:

A role for a multi skilled field technician predominantly focussing on vehicle telematics and video telematics installation throughout the UK.

This is an excellent opportunity to join one of the UKs leading telematics and growing providers offering long term career prospects. This role will ideally suit a practical and resourceful self-starter, where no two days are expected to be the same with a determination to manage own time.

You will represent the brand and therefore its reputation whilst on site additionally provide training and QA checks to UK dealerships fitting our products.

You will be given full training in this position as well as the opportunity to progress within the company as they continue to grow.

This role would suit a service technician with experience of installing third party automotive electronic systems or a background in dealer vehicle servicing and diagnostics.

Role Profile:

- Carrying out Installations of new vehicle telematics
- Diagnosing and resolving any previous installation faults
- QA checks and Dealer training, to promote best practice of existing and new products
- Managing the relevant inventory
- Provide audits and vehicle testing to continue product innovative and current at all times
- Work with engineering and product design teams to optimise installation methods

Key Skills:

- Technician with at least 3 years' experience
- Understanding of the automotive servicing sector
- Installation of Telematics/Black Box tracking products would be an advantage
- Existing FITAS approval would also be desirable but accreditation training for the right candidate would be provided.
